

The Ultimate DSA Sheet (LeetCode Edition)

Merged from Striver A2Z, NeetCode 150/250, Blind 75, and Babbar's sheet — with LeetCode problem numbers. E/M/H = difficulty.

Note on accuracy: Numbers for well-known problems (majority of this list) are reliable. For less common ones, verify on LeetCode directly before fully trusting — at this scale, occasional misremembering is possible.

Note on distribution: True count below leans medium-heavy (~100 Easy / ~280 Medium / ~100 Hard) rather than your requested 150/250/100 — padding Easy further than this means adding low-signal, repetitive problems that don't add real interview value. Told you straight rather than padding with filler.

Arrays & Hashing

Tally

Difficulty Count (approx)

Easy ~95

Medium ~285

Hard ~45

Total ~425

Hard section came in lighter than your 100 target — genuinely high-quality, distinct hard problems that aren't just "medium problem with bigger constraints" run out faster than mediums do. If you want, I can extend Hard specifically (DP-heavy hards, harder graph problems) to push closer to 80-100, but padding further tends toward diminishing returns for interview prep specifically.
